## INTRODUCTION NOTE:

This is a guide to enhance the KATA presentation event.

It's not a mandatory and other more complex available means and solutions are accepted or even more simple like running the zoom meeting from your smartphone.

### **Abstract:**

The KATA presentation format is free and it should thrive to be the best possible quality.

In our time and age any mobile equipment (like a smartphone) holds a very high quality camera comparing with a laptop's webcam or even adapted webcam to desktops and tower systems.

### **Objective:**

Help the competitor present the KATA with the best quality possible, in such a way that would help the scoring of the performance.

### **The solution:**

Tested in several scenarios the offered solution is published by IRIUN (<https://www.iriun.com>) and meets all the necessary requirements and due to it's versatility it is available for ANDROID and APPLE IOS.

### **Procedure:**

#### 1.- In the computer system running ZOOM

Independently of the system OS (WINDOWS or APPLE MACOS), open the [IRIUN](https://www.iriun.com) website and download the software to run in the system and install it.

#### 2.- In the smartphone

Go to [GOOGLE PLAY](https://play.google.com) for Android or to the [APP STORE](https://apps.apple.com) for Apple IOS, download and install the app on the smartphone.

The installation is fairly easy.

### 3.- Use

First and before use there are some requirements to observe:

- Assure that the computer system and smartpne are on the same IP Network;
- Always start the software on the computer system first;
- Start the app on the smartphone after the PC;

Once the communication between the smartphone and the computer system is established go to the ZOOM setup:

Uma vez estabelecida a ligação entre o PC e o telemóvel, proceder à configuração da camera no ZOOM:

- 1.- Once authenticated in you zoom account, go to the webcam (video) configuration and press on the button on Fig 1.
- 2.- Select the VIDEO option and choose the IRIUN camera on the dropdown menu like Fig. 2

From this point on your smartphone camera is the video source for your ZOOM presentation.

In reference to the e-Tournament rules, please place the smartphone like it is recommended.
